## How to measure for your custom shade sail.

Measure the distance from mounting point to mounting point for your shade sail OR from corner to corner of the actual sail, **NOT BOTH**. Non Rectangular or Square shade sails require an additional diagonal measurement in addition to side measurements. We will deduct approximately 10% from each measurement to allow for mounting hardware and enough room for tensioning and fabric stretch. Final shade sail dimensions will be approximate due to fabricating tolerances and fabric stretch. The perimeter of each sail is designed with a gentle curve inwards towards the center of the sail to control fabric tension. This inward curve varies between 8-14% of the length of each side of the shade sail. Therefore, when properly installed under tension, the shade sail will not wrinkle, sag, or flap in the wind.

Triangle	Right Angled Triangle		Square / Rectangle	4 Sided Polygon
<p><input type="checkbox"/> Triangle</p>	<p><input type="checkbox"/> Left Handed</p>	<p><input type="checkbox"/> Right Handed</p>	<p><input type="checkbox"/> Square/Rectangle</p>	<p>Polygon 4 <input type="checkbox"/></p>
